

Abstract

This paper introduces a new approach to sequence modeling that optimizes the self-attention mechanism. Traditi

Introduction

Deep learning models for NLP typically rely on recurrent or transformer architectures. Recurrent models process

Methodology

Our architecture consists of a 6-layer encoder-decoder network. We construct our dataset from WMT 2014 corpora

Results and Critical Limitations

Our model achieves 27.8 BLEU score, showing competitive performance. However, a major limitation is its sens
